PROFESSIONAL SUMMARY

AI-assisted web builder and operations lead, looking for remote work in web development, digital operations, accessibility, or nonprofit technology. After seventeen years running kitchens I now specify software — product, voice, accessibility, acceptance criteria — direct AI to build it, and own the result. Three live sites in three deliberately different designs, plus a research application mapping nearly four thousand official statistical reports and the dependencies between them.

SELECTED PROJECTS

The Economic Report Influence Graph

July 2026 – present

TypeScript · React · Three.js · no backend · github.com/DriftingSplash9/Reports-Clustering

- A browser-based 3D map of where official numbers come from: which published statistical report is calculated from which other, across 130+ countries and every tier from national to municipal.
- Built on one rule — *no document, no edge*. A dependency is drawn only where a published source says so in quotable words, and every edge carries an A/B/C grade for how well its citation supports it. Holding that standard across eighty-plus research sessions is the hard part, so the repository carries a fixed extraction protocol and a validator that refuses to pass on a dangling reference.

Personal platform — family history, tools, and writing

2024 – present

thomascheesman.ca

- Multi-section public site: an eight-line family heritage archive, long-reads, privacy-first galleries, a timed game with a server leaderboard, and an interactive map plotting four centuries of documented events as certainty-weighted markers. Product owner throughout — design, voice, architecture and acceptance criteria.

Bare Your Rare — rare-disease stories and resources

2024 – present

bareyourrare.org

- Founded a patient-led site for ultra-rare conditions — first-person stories, registries, research organisations and support — built because most Hajdu-Cheney patients searching for information still find almost nothing. Framed around patient-generated data and AI-assisted pattern-finding in very small cohorts.

Grande Prairie Residential Society website

2023 – present

gpresidentialsociety.com

- Designed, built and maintain the site for a volunteer-run nonprofit providing barrier-free housing — 87 units before the Margaret Edgson Manor fire, with the rebuild under way and the final count not yet settled. Accessibility and plain language are first-order requirements here, not decoration applied at the end.

Rocket Lander

2026

Godot 4.7 · GDScript · Jolt physics

- A teaching game on a real aerodynamic flight model, built over a few days — gimballed thrust, split along-hull and across-hull drag, layered gusting wind, finite fuel. The 38 tuning knobs are the interface, so a child learns the forces by flying against them.

EXPERIENCE

Board Member — Grande Prairie Residential Society

June 2023 – present

- Created and publish the public website. Volunteer on the maintenance, marketing and special projects committees, starting a fundraising committee, and contribute to outreach, planning and governance — including through the post-fire rebuild of Margaret Edgson Manor.

Caregiver — private client

March – December 2023

- Managed daily schedules, dietary routines, and medication timing.

Kitchen Manager / Executive Chef

February 2002 – March 2019

Hospitality operations, Alberta — including Ric’s Grill; instruction at GPRC, now Northwestern Polytechnic

- Led kitchen teams; owned budgets, purchasing, scheduling, human resources and remote supplier coordination.
- Built the custom Excel systems the operation ran on — inventory, sales, staffing and waste. Taught one semester of culinary arts in the Hospitality and Tourism diploma, and continued consulting for a restaurant owner for about a year after leaving the line.

SKILLS, EDUCATION & TICKETS

Web	HTML, CSS, JavaScript, TypeScript, PHP, custom WordPress themes, accessible UI, Git and GitHub		
AI-assisted	Specify, review, debug and ship; prompt and protocol design; editorial control over generated code; holding one standard across long multi-session work		
Data & ops	Custom Excel systems for inventory, sales, scheduling and budgets; research extraction under strict sourcing rules		
Leadership	Kitchen management, remote supplier coordination, nonprofit board work, disability advocacy		
Writing	Plain language for people who did not come for the jargon — patient-facing, nonprofit and technical documentation		

Journeyman Chef	SAIT, 2012	B.Sc.	Credits earned, 1999–2002
Self-directed	freeCodeCamp and related; daily build practice on live sites	Also held	Power Engineering 4th Class · Gas Plant Operator Levels 1 and 2

CAREER NOTE

I left the line in 2019 because I have Hajdu-Cheney syndrome, a rare connective-tissue disorder, and kitchen work stopped being sustainable. I spent the years that followed on family care and self-directed study, then started shipping public sites. The work is remote, and that is the only thing I need it to be.
